Yamaha. The name you can trust

YAMAHA GENUINE Parts & Accessories

Yamaha - a name synonymous with performance, quality and reliability; and a reputation earned from years of creating the world's most advanced outboard engines and marine products. In fact, millions of water sports enthusiasts and professionals choose Yamaha because it's the name they know and trust.

Because we apply the same high standards and attention to detail to everything we make, it's no surprise they also choose Yamaha when it comes to parts and accessories - and what's more, all our products are designed to work seamlessly with each other, which means not just co-ordinated looks and styling, but better performance and total peace of mind.

There's a wide range too, extending from watersport accessories, hi-tech marine lubricants and ingenious security locks, to protective covers for engines and watercraft, smart steering wheels and performance props. Not to mention remote controls and steering systems, switches, filters, fuel tanks ... and other practical things.

Check out too, our new line-up of Digital Network Gauges and electronic control systems. It brings a revolution in boating confidence, enjoyment and safety, with its integral, centrally-managed system of command and control.

So whatever you need to enhance your fun and enjoyment on the water, we've got it covered with products that are designed to perform ... and built to last.

Prices are valid for 2008.
Please note, prices quoted may be subject to change wihout prior notice.

THE SIMPLE WAY TO ENJOY PEACE OF MIND!

The latest-technology Yamaha engines, both 2-stroke and 4-stroke, offer quieter, smoother, more economical power and performance from outboards and personal watercraft than ever before, and with much lower exhaust emissions. So it makes perfect sense to choose a high-performance oil, specially designed to match the sophisticated technology to be found in the engine itself.

And it's not just a question of optimising the engine's performance when it's out on the water. Yamaha reliability and durability is legendary, so we have developed a range of special lubricants which not only maximise the everyday performance of these remarkable new engines, but give them the assurance of long-term protection, even under the most severe and demanding conditions. Meet YAMALUBE!

In your Owner's Manual you will find YAMALUBE specified as the recommended lubricant, simply because it is especially formulated to maintain the performance and reliability level you expect from your engine ... for life.

So be sure to ask your dealer for YAMALUBE. It's just a simple word, but it spells peace of mind!

1. YAMALUBE 4-STROKE ENGINE OILS

Specially developed for the new generation of 4-stroke marine engines, these oils provide optimum protection, using special additives and antioxidants that also keep the engine clean and running at peak efficiency. Because outboards and watercraft face unusually demanding conditions, these oils feature special properties that not only look after the engine in the all-important period immediately after starting from cold, but also during continuous operation under heavy load or high speed.

4-STROKE FCW ANTI-CORROSION ENGINE OIL:
10W40 FCW – Outboard Motors
10W30 FCW – Outboard Motors

A special anti-corrosion formula with balanced inhibitors to protect the vital parts of the engine against the extreme demands of the marine environment at both idle and running speeds.

4-STROKE FUEL ECONOMY ENGINE OIL:
10W40 API SL/CF – Outboard Motors
10W30 API SJ/CF – Outboard Motors and PWCs

An excellent all-round performance lubricant with good wear-protection properties and a special formulation to promote fuel economy.

1

2. YAMALUBE 2-STROKE ENGINE OILS

YAMALUBE 2-stroke Outboard Engine Oils are well known for their ability to minimise carbon build-up, but they have now been re-formulated to provide even better protection and lubrication. They are ideally suited to both premix and Autolube® applications and the increased quality level can be recognized by the "TC-W3 RL" description on the label.

SUPER 2-STROKE TC-W3 RL ENGINE OIL (Outboard Motors and PWCs):
A high quality lubricant designed to deliver top performance in the most arduous conditions. The special formulation also ensures very low smoke emission.

2-STROKE ENGINE OIL (Outboard Motors and PWCs):
Fully synthetic and bio-degradable, this premium oil helps reduce smoke to a minimum; so you get ultimate engine performance combined with optimum protection.
Please note: This bio-degradable oil is NOT suitable for HPDI motors.

2-W JASO FC CLASS FOR PERSONAL WATERCRAFT:
A new, high performance, semi-synthetic lubricant with advanced smoke-reducing technology, formulated specially for use in 2-stroke personal watercraft.
Please note: YAMALUBE 2-W is NOT suitable for outboard motors.

2

Please refer to the Part Number section on page 4 for more information

1. OTHER YAMALUBE PRODUCTS

STERN DRIVE DIESEL 15W40 API CF ENGINE OIL:
Just like the other oils in our range, this formulation is designed specifically to suit the demanding conditions encountered in the marine environment, offering easier engine starting and maximum protection against wear and corrosion.

YAMALUBE GEAR OILS:
SAE90 API GL4 – Outboard Motors
SAE90 API GL5 – Stern Drives

Gears need protection just as much as the engine. Yamalube gear oils offer high strength and resistance to rust and corrosion, control foaming in the gear case and have excellent load-carrying ability under extreme pressure.

LICAL GREASE:
A premium quality, multi-purpose grease that is supremely water resistant. The advanced Lithium/Calcium formula makes it the perfect choice for all temperatures and in all service conditions.

1

WARNING: In the event that YAMALUBE is unobtainable, always check the specifications very carefully before using an alternative lubricant.

Never use a 2-stroke oil for your outboard or personal watercraft which is not specially formulated for these applications. Other oils can cause problems, notably carbon build-up in the engine, which can lead to reduced engine performance, or even severe engine damage.

The "TC-W3 RL" quality level is the highest quality available for 2-Stroke Outboard motors and offers the best possible lubrication.

WHEN COMPROMISE IS NOT AN OPTION, THE CHOICE IS YAMALUBE

Ten-times World Champion Nicolas Rius is a legend in the sport of watercraft racing. 'The Fighter' as he is known around the circuits of the world, has delivered victory after victory on his Yamaha WaveRunners, using his mega-powerful and super-quick GP1300R for the Runabout Pro class and a SuperJet in the Ski category.

Engineering-wise, the team of mechanics at Rius Racing would stop at nothing to make sure his machines ran the course reliably and more quickly than their competition, and for them, the choice is always YAMALUBE. In the extreme conditions of this high profile and demanding sport, nothing is left to chance and the specialist lubricants developed by YAMAHA for marine use are dedicated products that promise ultimate engine performance as well as protection for those precious, fast-moving parts!

So even though you probably won't ever push your engine anywhere near its limits, like this man does, it's good to know that your oil would stand up to the challenge if you did!

Clothing & Accessories

THE SMART CHOICE

Stylish, practical and hard wearing, all our clothing and accessories are the perfect combination of comfort, quality and design. So when you want to look the part on land or water, the Yamaha logo says it all.

MEN'S CLOTHING

1. PORTOFINO JACKET (BY HELLY HANSEN)

Premium quality hip-length coastal boating jacket that's great for wearing on shore as well. The 2-layer HellyTech® fabric is lined with mesh and taffeta for superior comfort and LIFA® Stay Dry technology is used in the collar to wick water away from the neck.

- Waterproof, breathable and fully seam-taped
- Full-featured hood
- Stealth cuffs to keep water out
- Colour: penguin/navy/white

D07-0K10A-1S-7D	XS	
D07-0K10A-S0-7D	S

Watersports Accessories

SERIOUS FUN

The combination of speed and water is what makes water sports so irresistible. Whatever level you're at: beginner, intermediate, advanced, or perhaps you just want to have fun, we've got the products to suit you and, more importantly, the quality that won't let you down.

Whether it's wetsuits, wakeboards, water-skis, inflatables or accessories, we pour our years of knowledge and experience into each one. They've all been designed and manufactured to our exacting high standards. So you can rest assured, if it says Yamaha, it means you're going to get superior design, quality and fit.

1. FULL SUIT CLASSIC

A very comfortable full suit designed to keep you warm and toasty on those cooler days.
- 3mm neoprene mesh body for extra warmth
- 2.5mm arms and legs for more flexibility
- Soft and stretchy neoprene
- Comfortable flat stitch design
- Glide-skin seals for easy entry/exit
- Seamless armpits
- Comfortable glide skin collar

6

1. DRYSUIT

This great suit does exactly what its name says. It forms a complete barrier against the water, allowing you to wear normal clothing underneath if required.

- 400 Denier PU-coated waterproof nylon fabric
- Latex neck, wrist and ankle seals
- Hi-tech Titex zippers
- PU sealing tape on inside seams
- Removable braces
- Elasticised waist for a tailored fit

YMM-6SD01-XS-BL	XS	
YMM-6SD01-S0-BL	S	
YMM-6SD01-M0-BL	M	
YMM-6SD01-L0-BL	L	
YMM-6SD01-XL-BL	XL	
YMM-6SD01-L2-BL	XXL	£271.99

1

If the neck or wrist seals are too tight they can be adjusted by carefully cutting them. The inside of the watertight seals are ringed. After checking at which point the seal is most comfortable they can be cut between the thicker ring lines to alter the seal tightness.

2. NEO SHORTS

Ideal when the weather's hot but you still need just a little warmth.

- Comfortable and very flexible
- 2mm neoprene
- Adjustable waist buckle ensures a perfect fit

YMM-6S005-XS-A0	XS

2

3. RASH GUARD

A very comfortable lycra shirt designed to be worn under a wetsuit to prevent chafing. Worn on its own in milder weather, it gives added warmth and protects you from the sun and wind. Looks stylish too.

- UV protective material
- Flat stitched
- Seamless armpits
- Comfortable and soft 4-way stretch fabric

- Thermo bonded seams
- Double tow point
- 3 Air chambers with Halkey Roberts valve
- Repair kit included
- Size: 440cm/173"
- Rider capacity: 5 persons

YMM-6T011-11-00 £1,049.99

2

3. SPEEDSCOOTER II

Designed to look like our famous WaveRunner, this is exhilarating to ride and will certainly get heads turning.

- Carries one or two people
- Strong and durable
- Two handles at the front, two handles at the back
- Two drain floors
- Boston valve for quick inflation and deflation
- Quick connector
- Size: 210cm x 142cm/85" x 56"
- Rider capacity: 2 persons

YMM-6T002-00-A0 £129.99

3

4. GIANT MARKER BUOY

- High-quality racing marker
- Heavy gauge PVC
- Stainless steel eye for anchoring
- Two air chambers - lower one can be filled with water for more stability

YMM-6T007-00-A1 £79.99

4

5. INFLATABLE PARTS

Boston valve
YMM-6T008-00-00 £3.79

Compressor adaptor
YMM-6T009-00-00 £3.99

Propellers

AT THE CUTTING EDGE

Yamaha propellers are designed with a sophisticated CAD/CAM computer system and extensively tested to match the Yamaha engine's power characteristics. Other propeller manufacturers simply do not have the Yamaha engine details necessary to design propellers which match engine design so precisely. While it is true that our propellers undergo far more extensive testing than some think necessary, we believe that when you purchase the finest outboard available, you expect the finest propeller.

We always recommend consulting your Yamaha Authorised Dealer for advice and selection of Yamaha Propellers.

RIGGING AND PROPELLERS – USEFUL INFORMATION

RIGGING THE OUTBOARD

When mounting the motor (or motors) two basic measuring principles are involved, and getting these right is important to gain maximum performance and efficiency from both hull and engine.

The first is the horizontal (left-to-right) measurement, and the second is the vertical (up-and-down) positioning.

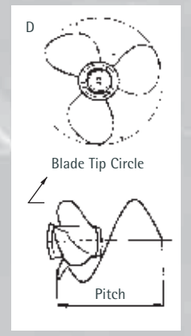
i] Horizontal measurement: In the case of a single engine, the exact centre of the transom width must be established and for a twin engine installation, BOTH engines must be an EQUAL distance from the same centre point of the transom.

ii] Vertical measurement: The vertical position of the engine relative to the boat hull, determines the degree of cavitation (air in the propeller stream). Choice of position will depend on the shape and type of hull, and how the boat is to be used (speed, cruising, fishing, transport etc).

ENGINE MOUNTING – SOME BASIC FACTS

- Most boat transom boards are angled inwards at their lowest point, and an angle of around 12° is normal.
- With the engine mounted to the boat, the drive shaft should be as close as possible to the perpendicular (vertical) in relation to the water surface and the Anti-cavitation Plate should be parallel to the water.
- The ideal Anti-cavitation Plate position is usually around an inch (= 2.5cm) below the lowest point of the hull, but for the perfect result in terms of maximum engine power and boat speed, it is necessary to 'fine tune' the installation by experimenting with various mounting heights and trim angles.

PROPELLERS - SOME BASIC FACTS



- Diameter: The tip of a propeller blade forms a perfect circle with one complete revolution, which is known as the Blade Tip Circle. The diameter of the BTC is referred to as the Propeller Diameter, (in inches).
- Maximum Propeller Diameter: Determined by the distance between the centre of the Propeller Shaft and the Anti-cavitation Plate.
- Pitch: Using the analogy of any screw that advances through a solid substance (such as wood) the distance the screw would have travelled forwards after one complete revolution is measured in inches and known as the Pitch.
- Constant Pitch Propeller: One that has uniform pitch on any part of the thrust surface of the blade.
- Effects of Diameter and Pitch: Propellers with larger diameters and smaller pitches are used for boats where the requirement is for lower speed but maximum power through the water. Conversely, a higher speed planing boat would use a smaller diameter propeller of larger pitch.
- Blade Rake: This is the angle at which the blade is attached to the propeller hub. An increased blade rake will improve the performance of engines with a higher elevation or in situations where ventilating and cavitating occur.

CHOOSING THE RIGHT PROPELLER FOR THE JOB

A Yamaha Outboard is The Right Choice for any boat, but for the very best speed, performance and efficiency, choosing the right propeller is just as important as mounting and rigging the outboard correctly.

The most essential requirement: A propeller should be selected that will allow the engine speed, when at full throttle, to stay within the rated rpm range at which the engine is designed to operate. In the case of Yamaha Two Stroke Outboards, the range is 4,500 - 5,500 rpm, and the equivalent range for a Yamaha Four Stroke is 5,000 - 6,000 rpm.

By choosing from the options in the reference table, a propeller can be found that is the perfect match for the operating conditions and hull performance of any boat.

Transport and workboats: Generally speaking, a smaller outboard with a boat of relatively heavy displacement or with a semi-planing hull, will need a propeller with larger diameter, smaller pitch, smaller rake and larger blade surface area. Make sure the propeller allows the engine to stay within the rated engine speed range at full throttle, even when heavily loaded.

Cruising and fishing: For best fuel economy, low noise and high engine durability, choose a propeller that allows the engine to operate at the lower end of the rated engine speed range when at full throttle. Usually, a larger pitch propeller will be required.

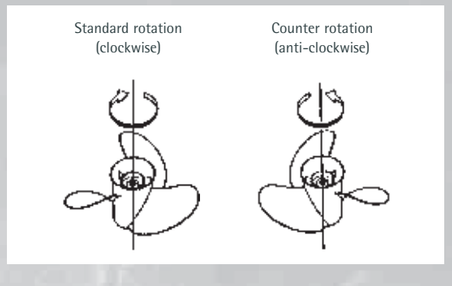
Waterskiing and wakeboarding: Maximum speed of acceleration is needed to pull a skier out of the water, so a propeller should be selected which allows the engine to operate near the upper limit of the rated engine speed range at full throttle, WHEN NO SKIER IS BEING TOWED. Warning: Only actually operate with partial throttle under these no-load conditions (watch the tachometer!) so that the engine rpm limit is not exceeded.

Sportsboats and runabouts: Maximum top speed and acceleration are needed for this type of boat, so a propeller should be selected which allows the engine to operate slightly below the upper limit of the rated engine speed range when at full throttle.

As mentioned earlier, outboard mounting height and trim angle are critical for top performance, particularly on a high-speed boat, so adjustments and testing with several propeller types are needed to establish the optimum settings.

MORE PROPELLER FACTS

- Direction of rotation: Yamaha propellers are right-handed. That is to say, when viewed from the stern, they turn clockwise to move the boat forward.
- Twin outboard installation: A counter-rotation propeller (anti-clockwise when viewed from the stern) is fitted to the port side outboard, and a standard propeller to the starboard side. This ensures neutral helm and easy manoeuvrability, by counter-balancing the turning forces inherent in the propellers.
- All Yamaha Outboards (except Electric Drives) are offered with 3-blade propellers.
- 4-blade stainless steel propellers are available as an accessory.



GENERAL, OFFSHORE AND SPORT

1. PLASTIC/ALUMINIUM SERIES

Although plastic/aluminium is the lowest-cost option for most engines, these **Yamaha** propellers provide better performance than other plastic/aluminium propellers because of their precise matching to **Yamaha** engines. The light weight and lower cost also makes aluminium propellers an excellent choice as a spare propeller, in case striking an underwater object accidentally damages the primary propeller.

1

2. STANDARD BLACK STAINLESS STEEL SERIES

These propellers are designed as excellent general-purpose propellers. The steel construction allows for a blade that is thinner, more efficient and more durable than an aluminium propeller. The painted blades both reduce the cost and provide longer zinc anode life in saltwater, by reducing the exposed dissimilar metal surface. They are available in both standard right-hand rotation and (from F115 and higher) as left-hand rotation for twin engine applications.

2

3. RELIANCE SERIES

A new line-up of polished stainless steel propellers that offer more 'aggressive' performance than the Standard Black Steel Series and which are designed for operation with the more powerful engines, from 150hp upwards. They offer excellent performance under a wide range of conditions. Available in standard right-hand configuration and also with left-hand rotation for twin-engine installations.

3

Please refer to the Part Number section on pages 31 - 33 for more information

1. SALTWATER SERIES

This is the top-of-the-range propeller designed for larger boats using larger engines, such as twin-engine offshore fishing boats. The Saltwater Series features a highly polished, larger diameter design. The aggressive rake angle and extra cupping on blades provide superior mid-range fuel efficiency, along with excellent anti-cavitation performance. To the offshore fisherman, this means improved cruising range and better handling in rough seas. The most efficient engine response is maintained for excellent overall performance. These propellers are available in five pitch sizes with either matching right or left-hand rotation for single or twin-engined boats. They will fit V6 engines from 150 to 300hp and the new V8-powered F350 (see special applications – Page 31)

1

2. PERFORMANCE SERIES 3-BLADE AND 4-BLADE

If you want to get more from your engine, these specialised polished steel propellers are the next step up from the **Standard Black Stainless Steel Series**. They can enhance performance of certain boats and can improve their ability to handle particular conditions.

These propellers are generally more 'aggressive' than the **Standard Black Series,** so we recommend you select a pitch size one inch lower than the standard propeller. If you were previously using a Pro or Saltwater Series propeller, you should select a pitch size one inch higher.

3-Blade
This is available for engines from 20hp up to 80hp and beyond, and is available with a left-handed rotation for twin-engine boats.

4-Blade
This is the ideal choice for rougher conditions and gives improved acceleration (although this will result in a slight reduction in top speed), which makes it perfect for water-skiing or wakeboarding. It's available for engines of 80hp and higher.

2

3. PRO SERIES

This is the top-of-the-range propeller. It is specifically designed for single engine, high-speed boats that require "bow lift" and significant engine-mounting heights, such as bass boats. The Pro Series propeller blades are designed with high rake angles, progressive pitch and aggressive cupping for excellent mid-range and top-end performance. The exhaust tube includes specially-designed relief holes to improve low-speed acceleration. The Pro Series is available in three pitch sizes for the 60 to 130hp models, and four pitch sizes for the 150 to 300hp models. In addition, there are three specially designed propellers for the Vmax and Vmax HPDI engines.

3

4. VMAX SERIES

This is the ultimate propeller in our range and is designed to maximize the power of our Vmax engines. Its high-performance characteristics include superior acceleration and top speed. Due to the higher rake angle than the Pro Series, these propellers are the perfect choice for boats with a natural bow lift. (Available in pitches 23" to 29").

4

SPECIAL APPLICATIONS

5. SALTWATER SERIES XL FOR F350

Large heavy boats need to move more water. New Saltwater series propellers were developed especially for this revolutionary new V8-powered engine which have larger diameter and greater blade surface area to cope efficiently with the huge power of the F350.

5

6. DUAL THRUST SERIES

Specially designed for sailboats and other large-displacement craft, Yamaha's patented **Dual Thrust** propellers are built to handle the job of pushing heavy loads through water. The hub is carefully designed to redirect exhaust flow away from the blades, so **Dual Thrust** models cut through "clean water" for higher efficiency and better acceleration. Thrust is improved by up to 70% in reverse, and by 10% forwards. It is recommended that you contact an authorised Yamaha Dealer for advice on installation.

6

7. TRP PROPELLER SERIES

These are very specialised stainless steel propellers designed specifically for the twin rotating propeller D150H. They are available in 25" and 27" pitch sets. It is recommended that you contact an authorised Yamaha Dealer for advice on installation.

7

8. HIGH-PERFORMANCE SERIES

Specially designed for light hulls this propeller features sharp, narrow blades operating half-way above the water's surface. One of the characteristics of the High-Performance propeller is the overhub exhaust. It will fit all engines between 60 and 300hp.

Incorrect use of High-Performance propellers can lead to engine damage. Always contact your authorised YAMAHA Dealer for advice on installation.

Instruments & Digital Network Gauges

THE REVOLUTION IS HERE!

Owners of Yamaha engines, whether outboard or diesel, have always been able to choose from a comprehensive range of instrumentation to keep them up to speed with all the key information needed to run their boats enjoyably and safely. In that respect nothing has changed, because on this and the following pages, the line-up of Yamaha gauges and instruments is as impressive as ever: Digital, Analogue and Advanced Analogue ranges, round dials, square dials, white faces, black faces ... but in the world of Yamaha nothing stands still for long!

In addition to these very popular stand-alone instrument lines, this catalogue introduces our amazing new range of DIGITAL NETWORK GAUGES and the incredibly efficient and sophisticated digital system that controls it. For owners of the latest Yamaha Outboards (2008 models from 50hp up) this really is 'a revolution' in command and control, making for safer, more relaxed and even more enjoyable boating.

We always recommend consulting your Yamaha Authorised Dealer for advice on technical specifications and installation of Yamaha gauges and instruments.

DIGITAL INSTRUMENTS

These intelligent pieces of advanced technology not only make life easier, they can also improve the performance of your boat. You can see at a glance the current status of your engine systems, but they also provide valuable information to help you fine tune the throttle and trim settings, enhancing efficiency and economy.

1. MULTIFUNCTION OUTBOARD TACHOMETER

It's durable, accurate and its LCD digital read-out is designed for optimum visibility, providing a wealth of vital information including:
- Engine RPM
- Trim angle
- Oil level
- Hour meter (accumulated and trip)
- Water Separator Warning Indicator
- Warning lamps (switchable 4 or 2-stroke option)
- Engine Warning Indicator
- Overheat Warning Lamp

1

2. MULTIFUNCTION SPEEDOMETER

This sturdy user-friendly and easy-to-read LCD speedometer has everything you need including:
- Speed
- Trip
- Time
- Fuel
- Battery voltage

2

3. FUEL MANAGEMENT GAUGE

Lets you know all that's important concerning the status of your fuel.
- Fuel consumption
- Fuel economy
- Fuel contamination
- Engine synchroniser for dual engine applications

3

4. DIGITAL DEPTH SOUNDER

This clever piece of kit contains a microprocessor that can instantly alert you to changes in depth.
- Audio and visual 3-stage Advanced Warning System
- Depth reading from 80cm - 60m
- Programmable warning system
- Transom transducer
- White face bezel also included

4

5. MAINTENANCE GAUGE - TACHO/HOUR METER

Specially designed for 4-stroke engines, this helps monitor the service needs of your outboard.
- Service intervals can be pre-programmed, starting at 10 hours initially and every 100 hours after that
- Meter flashes when a service interval has been reached
- Also provides tachometric readings

5

6. ENGINE HOUR METER

6

Please refer to the Part Number section pages 39 - 40 for more information

7. ADVANCED ANALOGUE INSTRUMENTS

This black and white range of advanced instrumentation brings enhanced quality and a sleek contemporary racing look to any dash. What's more, when you want to upgrade from your standard analogue instruments, nothing could be simpler. All advanced analogue instrumentation comes with special Yamaha connectors so they're completely interchangeable.

Speedometers are available with the following maximum speed indications:
80 km/h outer scale / 43 knots inner scale
120 km/h outer scale / 65 knots inner scale
50 mph outer scale / 80 km/h inner scale
75 mph outer scale / 120 km/h inner scale

Tachometers are available both in black and white in three variations:
- Tachometer for 4-stroke engines, which includes warning lights for the oil level and engine temperature
- Tachometer for 2-stroke oil-injected engines, with Oil Level indication
- Tachometer for small 4-stroke models, and 2-stroke pre-mix models

8. ANALOGUE INSTRUMENTS

Yamaha's standard range of analogue instrumentation is anything but standard. They're extremely accurate and are easy to read in virtually all conditions, with direct faceplate illumination for night-time viewing. They come in standard 85mm and 52mm sizes, and their classic/contemporary design will complement the dash of any boat.

Speedometers are available with the following maximum speed indications:
80 km/h outer scale / 43 knots inner scale
120 km/h outer scale / 65 knots inner scale
50 mph outer scale / 80 km/h inner scale
75 mph outer scale / 120 km/h inner scale

INSTRUMENTATION FOR HYDRA DRIVE DIESELS

Attractively designed, informative and easy-to-read instruments add to the pleasure of using YAMAHA HYDRA DRIVES and a stylish engine monitoring package is already supplied as standard with all HYDRA DRIVE engines; tachometer, oil pressure, cooling water temperature, battery voltage, and trim position indicator.

Other instruments are now available to match these, including a speedometer (for connection to the standard built-in pick-up of the HYDRA drive unit) and fuel level and turbo boost pressure gauges.

A special instrument package is also available for flybridge boats, including a tachometer and a matching panel with Engine Start/Stop buttons. When full repeat instrumentation is required at the second helm position, an additional warning lamp panel and instrument cluster can also be added.

DIGITAL NETWORK GAUGES

FULL COMMAND AND CONTROL. YOU ALREADY HAVE IT IN YOUR CAR ... NOW GET IT ON YOUR BOAT!

For years now, car drivers have expected nothing less than a fully integrated, computer-controlled system to monitor all technical functions reliably and accurately, with stylish instruments that are easy to read and understand. So why can't we expect the same luxury when we're driving a boat?

Well, now we can! Yamaha's new digital network system, with its comprehensive line-up of Digital Network Gauges, really is the revolution in command and control we've all been waiting for.

THE STYLE TELLS ITS OWN STORY

The smart, sophisticated appearance of these stylish new gauges immediately speaks for itself; they are simpler and easier to install than conventional systems, they are a real pleasure to read and use ... and every bit as tough and accurate as they look. We even offer a choice of round or square designs, and a range of mounts to suit your boat console; so if you own a 2007-model Yamaha EFI or HPDI outboard of more than 50hp then read on ... because this is for you!

ACCURATE INFORMATION IS THE KEY

Perhaps the most obvious advantage, which will be appreciated by any boat owner, is the availability of a wider range of advanced, accurate gauges than ever before; everything from basic speedometer and tachometer displays, to warning and control information on a wide variety of engine functions. In addition, the LAN system offers the comforting advantage of fuel flow management as well as electronic control of idling/trolling speed (F50/60/80/100); and if you choose to link your system to the (optional) triducer via the simple-to-install BUS harness, you can monitor speed, seawater temperature and depth as well. What's more, these are multi-function gauges, so the combination of functions displayed, as well as the order they appear, are user-selectable.

THE RELIABILITY YOU EXPECT FROM YAMAHA

At the heart of this revolutionary new experience for boat owners is a very robust (that's 'reliable' in technical speak) Local Area Network system ... or LAN; this offers a host of advantages, not only for the boat owner, but also for boat builders and dealers, for whom ease of rigging, fitting and maintenance is now a breeze. No more untidy jumbles of separate wires, hoses and cables; just streamlined, easy-to-connect bus harnesses from the engine to the hub and onwards to the instruments, with colour-coded connectors linking the components of the system. In addition, on-board diagnostics are a very simple procedure using a PC. You can also carry out regular system checks when you're driving. Once again, just like you do in your car.

COMPATIBILITY THAT ADDS REAL FUNCTIONALITY

Both the digital network system and the Digital Network Gauges are a perfectly engineered match for all 2008-model Yamaha outboards (EFI models) from 50hp upwards, all of which are now fitted with a special pre-installed connection port, enabling the engine ECU to communicate directly and efficiently with the central network. What's more, the LAN system's 'open architecture' and its NMEA 2000 compatibility also mean that many other peripherals can be connected easily to the network too. You can therefore add a GPS, radar or fish finder, as well as other navigation aids and equipment from electronics manufacturers who have chosen to use the NMEA 2000 protocol, opening up a whole new world of safer, more relaxed boating.

We strongly recommend consulting your Yamaha Authorised Dealer for advice on technical specifications and installation of Digital Network Gauges and LAN systems.

Please refer to the Part Number section pages 39 - 40 for more information

Remote Controls

POWER AT YOUR FINGERTIPS

Remote Controls are the answer. They're extremely easy to use and install, and they're specifically designed to be used with other Yamaha engines. So you can expect nothing less than smooth, responsive operating, not to mention excellent reliability and safety.

Whatever type of watercraft you use, whether it's for work or pleasure, there's a range of products to suit everyone's needs. You can choose from a standard control for smaller outboards right up to premium twin engine devices with multi-feature functions.

We always recommend consulting your Yamaha Authorised Dealer for advice regarding selection and installation of Yamaha Remote Control Boxes and Cables.

1. STANDARD 701 SIDE CONTROL

The perfect, functional choice for those with a smaller outboard.
- Single forward/reverse control lever
- Separate fast idle lever for user-friendly operation
- May require a Remote Conversion kit

1

2. PREMIUM 703 SIDE CONTROL

A first-class controller designed with electric-start Yamaha outboards in mind.
- Thumb-operated trim/tilt switch (on most boxes)
- Lockable neutral position
- Safety Lanyard
- Easy-to-use fast idle lever for quick warm-up
- Key switch for added security
- Forward/reverse lever
- Oil & overheat warning (selected models)
- Choke switch available on selected models
- May need a Remote Conversion kit

2

3. PREMIUM 704 TOP MOUNT

A thoroughbred unit with contemporary styling and advanced functionality.
- Button release for fast idling
- Corrosion-resistant upper body with fully enclosed lower casings
- Yamaha wiring harness for easy installation and improved water sealing

3

4. PREMIUM 704 TWIN CONTROL

All the quality and usability of the 704 Top Mount but for twin engines.
- Cutting-edge design
- Exceptionally smooth operation
- Individual switches for fine tuning each engine
- Thumb-operated trim/tilt switch on both engines

4

Please refer to the Part Number section on pages 46 - 47 for more information

5. REMOTE CONTROL SPACER KITS

Designed to raise the control box 22mm/0.9" to make more clearance when the lever is in wide-open throttle position.

704-48293-00-00	**for single lever standard**
704-48293-10-00	**for twin lever standard**
704-48293-20-00	**for single lever premium**
704-48293-30-00	**for twin lever premium**

5

6. PREMIUM TRIPLE REMOTE CONTROL

A unique Yamaha control, specially designed for triple installations of our F225, F250, Z250 (HPDI) and Z300 (HPDI) engines. Must be matched with Yamaha Triple Panel Switch and Digital Network Gauge/LAN system (6Y8).

Note: For the Triple Remote Control, the Yamaha PowerMatched (YPM) or equivalent control cable, is recommended. For further information, please consult your Yamaha Authorised Dealer.

6

7. PREMIUM 705 FLUSH SIDE MOUNT CONTROL

Slim fitting unit with exceptional controllability.
- High-degree throttle angle for finer control
- Thumb-operated trim/tilt switch
- Neutral switch
- Push-button neutral warm-up
- Corrosion-resistant casing

7

Please refer to the Part Number section on pages 46 - 47 for more information

1. ULTRAFLEX AND TELEFLEX CONTROLS

As well as our own branded genuine Yamaha Remote Controls, you also have the choice of Ultraflex and Teleflex in our range. There are plenty of options to choose from depending on your requirements including side-mount controls (B89, B90), flush-fitting controls (B183, B184, B85) and top mounted controls (B73, B77). There is also a control specifically designed for use on sailing boats (B85).

ULTRAFLEX:

Ultraflex B183 - Flush Side Mount	**YMM-21110-00-00**
Ultraflex B184 - Flush Side Mount	**YMM-21110-10-00**
Ultraflex B85 - Flush Side Mount	**YMM-21111-00-00**
Ultraflex B89 - Side Mount White (6C-50H)	**YMM-21100-00-00**
Ultraflex B90 - Side Mount Black (6C-50H)	**YMM-21100-10-00**
Ultraflex B73 - Top Mount	**YMM-21120-00-00**
Ultraflex B77 - Top Mount	**YMM-21120-10-00**

TELEFLEX:

Teleflex Side Mount (6C-50H)	**YMD-RCBOX-00-00**

2. REMOTE CONTROL ATTACHMENT KITS

The best way to convert your Yamaha outboard throttle and shift cable from manual to remote operation with the least amount of fuss.

- Solid durable corrosion-resistant construction
- For use with remote controls and control cables
- Steering hook not included

We recommend that Remote Control Attachment Kits and their associated parts be installed by a Yamaha Authorised Dealer, where further details and helpful advice are always available.

2

Please refer to the Part Number section on pages 46 - 47 for more information

3. REMOTE CONTROL CABLES

Only the very best cable performs smoothly and reliably enough to match up to the renowned quality of a Yamaha Remote Control.

Premium PowerMatched Control Cable (YPM):
These are top-of-the-line cables, with features and performance that have made them the first choice of professional riggers. The ultra-low-friction inner core wire has splines and a special cover to reduce contact with the liner, allowing rigging to even tighter tolerances; another benefit is reduced 'play' at the cable ends. We highly recommend the use of Premium PowerMatched cables for boats with severe applications and long cable lengths, on twin-engine installations and on any boat for unrivalled smoothness. These cables are designed to run smoothly even if installation demands that curves or a radius be applied within the cable run.

Original High Quality Control Cable (Y38):
Yamaha offers you a choice in remote control cables that are a perfect match for Yamaha's controls. Our proven original high-quality cables have set the standard with a "plastic-on-plastic" technology that reduced friction for excellent cable performance. The standard-core wires increase strength and reduce binding, allowing for a 4-inch bend radius - approximately 50% better than ordinary cables. The ultraviolet-stabilized jacket resists cracking and water migration to the core.

Please note: If the Yamaha YPM or Y38 is not applicable for rigging certain types of boats, the standard Y32 cable may be used.

Original High Quality Control Cable (Y38)

Steering Wheels

GRIPPING STUFF

It's the most important part of the boat you make contact with, so it's got to feel just right in your hands. Of course, a lot of this comes down to personal preference. Then there's style. You want a wheel that's going to suit the look of your boat. Which is why we offer so many designs. There's the classic all-white wheel – a favourite among Yamaha owners. If you like a retro look there are several styles to choose from, as well as some sleek minimal designs and the more classical shapes. Whichever one you choose, they all offer a firm grip and solid handling.

1. YMM-24010-00-SV*

Diameter 350mm £79.99

2. YMM-24001-00-BK

Diameter 335mm **£12.79**

3. YMM-24002-00-BK

Diameter 342mm **£14.99**

4. YMM-24005-00-BK

Diameter 350mm £47.99

Steering Systems

TURNING POWER

Power is nothing without control. Your outboard is only going to work as well as the system you use to steer it. That's why it only makes sense to use one that's been designed to work exclusively with our outboards. What's more, they've been developed with the help of our years of experience. Whether it's for leisure or professional use, you'll find every system in this range is built from high-quality corrosion-resistant materials. They're CE marked in compliance with the EEC-directive 94/25 according to EN/ISO 10592 and compliant with ABYC P21 and P22 standards.

Note: For boats that can exceed 60kmh, Yamaha recommends the YAMAHA hydraulic steering system & YAMAHA steering wheels. Yamaha steering systems should not be used on boats equipped with engines that exceed the horsepower rating of the boat.

We always recommend consulting your Yamaha Authorised Dealer for advice and installation of all Yamaha Steering Systems.

1. SEASTAR HYDRAULIC STEERING SYSTEMS

For high-horsepower, high-speed boating, steering systems must perform at maximum capacity, and the line-up of SeaStar Hydraulic Steering Systems from Teleflex is designed to provide that extra margin of smooth-turning muscle when needed. This comprehensive range, which comes recommended by YAMAHA, includes steering systems to handle a variety of outboard requirements for both pleasure and commercial applications.

Easy to install: Only three components: helm, cylinder and tube or hose, with a compact, attractive helm design and a variety of mounting configurations.

Easy to fill and purge: Engineered bleed fittings on the cylinders, plus a helm and lock valve design that enhances air removal and comes with a no-mess filler device.

Designed to provide many years of service: Precision all-metal construction, with heavy-duty bearings instead of bushings and a design that means no corrosion-sensitive materials are exposed to the marine environment.

1

Please refer to the Part Number section on pages 54 - 55 for more information

1. HYDRAULIC STEERING SYSTEMS

There are many benefits to be gained from using a system such as this with a Yamaha outboard. They're safe and, because of the design, highly durable. Unlike most other systems, the cylinder (Yamaha grey) is front mounted and is directly fixed to the engine. This means when the engine is tilted, the hoses between the cylinder and helm do not move together.

The Y33 front-mounted helm is supplied as standard in the kits and can be used for both single and twin engine/single cylinder installation. A Y39 helm is required for twin engine/twin cylinder installation, offering a smoother operation and the correct amount of wheel turns. Both Y33 and Y39 helms are available in front and rear mounted versions.

In addition, the Y33 and the Y39 Helm is available in a "tilt" version. The Y28 Tilt system fits on these helms to adjust the steering wheel position for maximum comfort and control. A square and round flange are separately available to ensure intermediate installation of the pumps in the dashboard.

Hose Kit

2. MECHANICAL STEERING SYSTEMS

All these systems are highly responsive and are designed and built to our exacting standards of safety, durability and comfort.

The Y22 and Y23 helms (or Y20 kit) can be used for all types of applications. Our Y23 helm has an extra self-centring mechanism, which means the wheel won't return automatically to the straight ahead position after a turning. Both these helms have to be installed with a Y25 Bezel, which is available in 20° and 90° versions.

Number of turns lock-to-lock:
Y12 - approx 2.5 Y22/Y23 – approx 3.8 Y24 – approx 3

The Y26 and Y27 helms are similar to Y22 and Y23, offering the same great quality and handling, but feature a 5-position tilt mechanism to adjust the steering wheel position for maximum comfort and control. The range of tilt is 48°.

To make installation quick and easy, there's a fast-connect system to attach the cable to the helm, and cables in all systems come with stainless steel ends. The Y12 (or Y10 kit) is for smaller boats with engines below 40 kW (or below 55hp). Y24 can be applied if conventional and simpler systems are required.

3. MECHANICAL STEERING FOR YAM INFLATABLE BOATS

If you have an inflatable boat, then a simple, effective way to convert it from a tiller to a steering wheel operation is with one of our excellent systems. There are three options to choose from depending on your boat and the type of system you require:

1] Rack and Pinion System with telescopic support tubes
2] Rack and Pinion System with floor anchor and lacing cuff
3] Floor-mounted, stainless steel Pedestal Steering System

For the Floor-mounted, stainless steel Pedestal Steering System, you'll need to choose a steering wheel in combination with the required Y11 Steering cable length and Y12 Helm/Bezel. Alternatively, simply choose the complete and easy-to-install Y10 kit.

For the rack and Pinion System, choose your steering wheel and select the required Y01 steering cable.

3

Rack and pinion system with telescopic support tubes in 2 different widths

4. ACCESSORIES FOR MECHANICAL SYSTEMS

Some outboard models require additional accessories for the connection between the steering cable and the engine.

Y11 Steering Cable with Transom Support (YMM-22601 -00) using Clamp block

4

Clevis
YMM-22610-00

Clevis
YMM-22611-00

5. STEERING GUIDE ATTACHMENT KITS AND STEERING HOOKS

These kits are required for connection between the steering cable end and the outboard's steering hook.

5

6. TILLER HANDLES

Some outboard models are not supplied with a tiller handle, but there is a great choice available from Yamaha, including the very latest multi-function handle, with its special features:

- Ergonomic design and longer, larger-diameter throttle grip
- Contoured, composite-coated lever for smooth, comfortable shifting
- Easy access Power Trim and Tilt switch for on-the-go operation
- Neat and conveniently positioned LED engine warning lamp
- Key switch and STOP switch easily accessible from the handle
- Built-in NEUTRAL switch and buzzer for simple rigging

Fitting kits may differ from the ones shown here and additional rigging parts may be needed for some tiller handles. Please ask your dealer for advice.

Fuel Accessories & Filters

WORKING AS ONE

The excellent compatibility of using Yamaha products together on your boat is always going to be better in the long-run. But here, more than anywhere else, it's absolutely crucial. Firstly, for safety and secondly, for performance, it's essential to use only Yamaha products where fuel is concerned. All Yamaha tanks, fuel pipes, filters and other accessories are designed to work together. Mixing different manufacturers' products could be costly and possibly dangerous. The Genuine Yamaha Parts stamp of approval means you've got peace of mind, knowing that this important part of your boat has been designed and manufactured to our uncompromising standards and will be working to maximum efficiency.

We always recommend consulting your Yamaha Authorised Dealer for advice regarding Service, Maintenance and Rigging Parts.

1. FUEL TANKS

All fuel tanks are equipped with an automatic de-aeration system, a level gauge and paint-free couplings. Our heavy-duty plastic fuel tanks are specially constructed for all conditions; safety and durability have been given top priority, as have the fuel pipes between tank and motor.

The fuel lines and improved connectors are totally unaffected by oil and fuel, and maintain their elasticity, even at lower temperatures. The permanently sealed version, with improved connectors, provides even greater flexibility and safety against fuel leakage.

The 5 Litre high density polyethylene fuel can is unbreakable and non-corroding. The no-spill spout provides full control when refuelling, as fuel will not flow until the nozzle is inserted into the fuel tank and gently pressed down.

2. WATER SEPARATING FUEL FILTERS

Keeping your fuel clean has and will always be an important issue where boating is concerned. Contaminated fuel affects performance and can increase the wear and tear on your engine. The trouble is, millions of small dirt particles are already in the fuel before it gets anywhere near your boat. That's where Yamaha Water Separating Fuel Filters come in. They are designed to be the most efficient systems available for removing dirt before it enters the pumps and injection system. Without one, dirty, unfiltered fuel could block your internal fuel passages causing the engine to run poorly or even fail.

Instead of the standard 35/27-micron filter, the Yamaha 10-micron filter will protect your engine by removing dirt, water and small foreign particles. The superior Yamaha 10-micron filters are highly recommended for all engines, especially HPDI models and EFI.

However, it's important to choose a fuel filter with the right capacity for your engine and regularly maintain it. If not, this could also affect performance and damage the engine. A simple rule of thumb is to ensure the litres-per-hour (LPH) of the filter is greater than that of the engine. This figure can be found in your owner's manual.

Remember, a filter that is too big or too good will not cause problems, but one that is too small or too dirty can restrict fuel flow, possibly resulting in engine failure.

Outboard Maintenance & Accessories

PRESERVING ENGINE LIFE

You can expect your Yamaha engine to give you years and years of trouble-free enjoyment. But it needs to be looked after correctly. That means regular servicing with a Yamaha dealer. No-one knows our engines better. They'll clean, check and adjust your engine, carburettor and ignition system. They'll also check your cooling system, transmission and propeller, as well as lubricate and change the oil. Always use Yamalube for regular oil changes. There are others on the market, but only Yamalube goes hand-in-glove with Yamaha engines. The same goes for Yamaha parts. Important items to change regularly are: self-sacrificing anodes (to resist corrosion of metal parts in the engine); impellers (part of the cooling system); fuel filters; and spark plugs. Finally, a Yamaha Outboard Motor Cover will prolong the looks and life of your engine.

We always recommend consulting your Yamaha Authorised Dealer for advice regarding Service, Maintenence and Rigging Parts.

1. ANODES

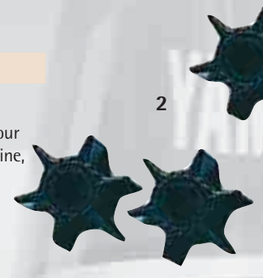
The materials and build quality of a Yamaha engine means it's already highly resistant to corrosion. The addition of a self-sacrificing anode will improve this even further. As a first line of defence, an anode is meant to corrode instead of your engine. It can easily be replaced by another, thereby protecting the engine. However, high-quality Yamaha anodes are more durable than most of their competitors and will need to be changed less often, thereby maximising the protection of your engine.

1

2. IMPELLERS

This vital component of the water pump ensures a continuous supply of the correct amount of coolant to the engine. Like all our parts, a Yamaha Impeller is intended for use with a Yamaha engine, so it's advisable to specify one every time it needs replacing.

2



3. ENGINE FLUSH KIT

This extremely useful piece of equipment connects in seconds to your garden hose and allows you to flush out harmful salt and sand. It can also be used for out-of-water operation for tune-ups.

3

4. PROPELLER WRENCH

Designed to fit F115 and all V4/V6 outboard prop nuts. Has a 9/16" square opening on the reverse side to open garboard drain plugs.

4

5. NGK SPARK PLUGS

These provide the ultimate performance for your engine. They're high-quality, reliable and their advanced materials and design provide superior anti-fouling characteristics, which reduce carbon build-up over a wide heat range. "V Type" plugs include a thin centre electrode tip, which is made of precious metal for added corrosion and oxidation resistance. The result: fast, sure starts and less misfiring, even in the coldest weather.

- Ribbed to eliminate flash-over and improve performance
- Highest quality ceramic insulators improve heat dissipation and electrical insulation to provide long term durability
- More Gaskets for peak performance
- Deep-seated copper core provides maximum engine efficiency at high and low speeds
- Projected insulator precision-engineered to prevent fouling and misfiring
- Nickel alloy tip prevents fouling, maximises performance and extends plug life

5

Please refer to the Part Number section on pages 65 - 66 for more information

6. RIGGING HOSE

Keep your cables protected and uncluttered with a Rigging Hose. Yamaha Hoses are tough yet flexible and are constructed from crush-resistant, UV-protected material to ensure a longer life span. Hoses are mounted using a chromium-plated copper or plastic bracket and come in black, grey or metallic blue colours.

6

7. RIGGING GROMMETS

These handy devices replace rubber engine grommets on bigger engines and provide positive attachment without the need for clamps. They can be threaded directly onto one end of a rigging hose with Transom Brackets at the other end.

7

8. TRANSOM BRACKETS

The tough plastic bracket is easy to install by just threading the Rigging Hose onto it. It requires no clamp, yet provides positive engagement. Use with the Rigging Grommet on the other end for quick, easy rigging. When the chromium plated copper "Through transom bracket" is used, the rigging hose is fitted with the clamp.

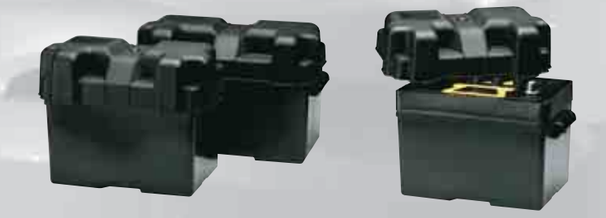
8

Please refer to the Part Number section on pages 65 - 66 for more information

1. BATTERY BOXES

Protect your battery and prevent the ingress of water with a lightweight battery box. They come in two sizes and include a nylon tie-down strap.

1



2. SPRAYPAINT

Scratches can cause rust or other types of damage. Fix them quickly and effectively with our high-quality, durable Yamaha aerosols and primers. They've been developed specifically for marine use and offer the best colour match for Yamaha outboards.

2

3. CARBURETTOR REPAIR KITS

After a long period of continued use, your carburettor will suffer from wear, which will reduce the performance of your engine by increasing fuel consumption. To remedy this, use this kit to recondition your carburettor.

3

OUTBOARD MOTOR LOCKS

Yamaha Outboards are valuable pieces of high-quality kit. That's why we've developed a strong, ingenious range of high security locks to protect them from theft. They comply with high safety standards and have passed rigorous testing by the respected VIP/TNO Institute in Holland.

- SCM - approved
- Key Code Card included
- Stainless steel
- 3 keys included

4

4. SMARTLOCK

- Optimal protection against theft
- Easy to fit
- Unique and modern design

5

5. NUTLOCK

- Based on Smartlock but designed for larger engines which are mounted with bolts through the transom
- Easy to fit
- Unique and modern design

6. YAMLOCK PRO (STAINLESS STEEL)

- Universal fitment
- Anti-drill protection
- Including rubber against resonance
- Easy to use

6

7. PROPELLER LOCK

- Protect your propeller investment
- Cost effective and easy to install
- Does not interfere with propeller operation
- Suitable for regular and counter-rotating propellers

2-Stroke 40-90hp, 4-Stroke 30-100hp

OUTBOARD MOTOR COVERS

A Yamaha Outboard is a quality investment, so it makes sense to give it the protection it deserves. There's no better way of doing this than with an Outboard Motor Cover.

They're specifically designed for every engine we produce from 2.5hp upwards. The fit is snug and stylish, and they're manufactured from a highly durable, waterproof fabric that is resistant to rot, mildew and UV light. The special soft inner lining protects the paintwork and will keep your engine looking at its best.

Every cover has a strong eyelet for tying it down to the engine, and most models have a stretch-cord fitting with a snap-buckle to keep the cover tight and secure in windy conditions or when towing the boat on a trailer.

All covers come with smart Yamaha logo and graphics and there are special styles to go with high-performance HPDI and Vmax models.

Yam Accessories

MAKING THE MOST OF YOUR YAM

YAM is a fresh, bright and innovative range of inflatables designed with one idea in mind – to bring you outstanding value for money.

YAM is tough, attractively styled, very comfortable and versatile.

It incorporates great strength and wear-resistance, and is built using today's most advanced construction methods.

What's more, each model is specially designed to work at its very best in partnership with one of our wide range of YAMAHA outboards, famous the world over for their reliability and performance. Together, they make an unbeatable package.

This extensive range of Genuine YAM Accessories has been introduced to add still further to the pleasure of ownership.

1. YAM COVERS / YAM BY ZODIAC COVERS

New boat covers made of a high quality polyester fabric with PVC coating, for durability and protection of your YAM inflatable.

Each cover is supplied with a handy storage bag, made of the same material. YAM covers are especially effective in protecting your boat against the destructive effect of sunlight. The use of a cover is recommended in your Owner's Manual, as it will further increase the durability of your inflatable boat.

1

2. YAM INFLATABLE SEAT CUSHION

These new cushions are available for all Tender and Sport models. The material, design and colour setting match the tubes of your inflatable. Provides a comfortable sitting position.

2

3. YAM STORAGE SEAT

Easy-to-install seat, enabling storage of your Yamaha 12-litre tank. After inflating the boat to 75%, the seat has to be put and extended as much as possible between the tubular sides of the boat and the bolts can be tightened. The seat is adjustable for a width of between 60 and 80cm.

3

4. YAM SEAT BAGS

These new bags are available for all Tender and Sport models. The bag made of water resistant material slides over the wooden bench seat of your YAM and features a cushion to soften your seat. The storage compartment is easily accessible and features two additional bags for storage of small items.

4

5. YAM BOW BAGS

These new bags are available for all Tender and Sport models. Specially designed for your YAM boat for perfect fit and easy installation, with design that matches your inflatable. They feature water resistant material, to protect all your equipment during boating. Besides the large compartment there are two small bags adjoining for the storage of tools and gadgets.

5

6. YAM WHEELS

Rubber heavy duty inflatable launching wheels. High quality 316 stainless steel pipe for optimal protection against corrosion and easy-to-use pivot system to raise the wheels. Suitable for both long transom and short transom inflatable boats.

6

7. YAM ROLL BARS

Top quality double-tube roll bars specially designed to fit, for example, the YAM 500R and 550R RIBs. Made of 316 stainless steel for superior durability and optimal protection against corrosion, unlike many of the lower quality bars available.

7

8. FABRIC CLEANER REVIVAL

An ecologically-friendly paste that cleans, degreases, polishes and protects. Specially designed for boat maintenance: it removes yellowing, tartar, rust and marks on the gel coat and tubes.

8

WaveRunner Accessories

ADDING TO THE FUN!

People love and cherish their WaveRunners! So when it comes to getting the most out of their pride and joy, always choose Yamaha Genuine Parts and Accessories - from covers and sports vests to batteries and lubricants. All offer the same level of advanced Yamaha design and quality we apply to building their treasured machines.

The exciting WaveRunner range includes nine models - from the incredible new SuperJet stand-up racing machine and the legendary GP 1300R, to the high performance line-up of seven super-sophisticated 4-stroke FX and VX watercraft, all of which offer new standards of quietness, economy and low-emission performance.

As always, of course, under the skin of every WaveRunner, is an unmatched heritage of race-winning performance and marine engineering that's integral to every Yamaha-powered craft; and as the world knows, that means Number One for optimum reliability.

For this world-beating watercraft line-up, Yamaha Genuine Parts and Accessories are the perfect match.

1. COVERS

A Yamaha WaveRunner is undoubtedly the best looking personal watercraft there is. Help yours to stay looking that way with a Yamaha WaveRunner Cover.

They're specifically designed to protect and fit every curve and corner of your beloved machine. Durable and tough, each one is constructed from high-quality materials to ensure long life. They resist water, fading, the elements and rot.

Complete with slick graphics and Yamaha logos, each cover also comes with its own high-quality storage bag made from the same material.

Note: during transport, covers must be secured with straps under the watercraft using the special eyelets on the side of the cover.

Fuel Tank Access
The zip allows easy access to the fuel tank cap without having to remove the cover.

Eyelet Access
Provides access to eyelets on the front and back sides of the craft when you want to secure it with dock lines or tie-down straps for transportation.

Ventilation System
Lets air circulate around the craft while it is being stored. This is important to reduce the chance of humidity forming. It also creates a vacuum inside the cover during transport, which draws it more tightly against the craft.
